

Thoroughly irrigate the wound and dress with antibiotic-impregnated gauze and secure to Geoff's leg with a self-adhering bandage. Lighten Geoff's pack and assist him to camp. Monitor and reclean his wound 3-4 times per day. If no S/Sx of a local infection appear after 24 hours, attempt to align the wound edges and secure using steri-strips. Contact your program director by cell or sat phone to arrange an evacuation for physician follow-up and potential closure.
