

Directions for Test.com Use

Login:

Enter <http://www.test.com> into your browser.

The screenshot shows the Test.com homepage. At the top right, there is a navigation bar with links for "About Test.com", "Help", and "Log In". The "Log In" link is circled in red. Below this is a purple navigation bar with "Individuals", "Organizations", "Quick Tour", and "Contact Us". The main content area features a large image of people in a meeting, a central text block about "Easily Author and Administer your own Training Content, Tests, and Certification Programs Online!", and two side panels: "Test.com For Organizations" and "Individuals Looking for Tests". At the bottom, there are three columns: "My Test.com" with a red "Test.com Customer Entrance" button, "Search for Individual Tests" with a search box, and "What's New" with several news items. At the bottom of the page, there is a footer with "Home", "For Individuals", "For Organizations", "Quick Tour", and "Contact Us". A "Log In For Test.com Customers" link is also present in the footer. Two red arrows originate from the bottom of the page: one points to the "Test.com Customer Entrance" button, and the other points to the "Log In" link in the top right corner.

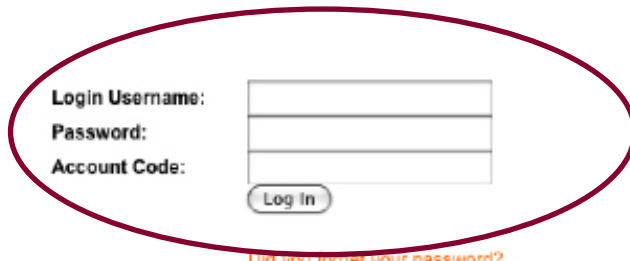

Click either link to login

Click on either the **red button** titled Test.com Customer Entrance or the **Log In** link at on the upper right hand corner of the page. This will bring you to the login page:

Log In to Test.com

In order to proceed, you need to log in. If the organization you're affiliated with is a Test.com customer, but you don't have a Test.com user account - you will first need to create a new user account that contains information such as your name and password. To create a new user account, select the appropriate link under the Log In button below or [click here](#).

Please log in using your username (or email), password, and account code.

The login form consists of three stacked input fields. The first is labeled 'Login Username:', the second 'Password:', and the third 'Account Code:'. Below the fields is a 'Log In' button. The entire form is enclosed in a red oval, with a red arrow pointing from the text on the right towards the oval.

Use the information emailed to you from the WMTC office to fill in these three windows.

[Did you forget your password?](#)

[Need to create a new user account?](#)

[What is Test.com? - Learn More](#)

Nervous about using Test.com? Don't want to be spammed? Read our [privacy policy](#). We don't share your private information with anyone. Period.

Using the login information sent to you from the WMTC office enter it in the corresponding window and click the Log In button.

The test.com wizard is case sensitive; avoid using any additional characters or spaces. Note: you may use the email address you registered with in place of your user name.

Please do **NOT** change any of your account information as this makes it difficult for the WMTC office to keep track of your test results.

Use the [Did you forget your password?](#) link if you indeed forgot your password. You will be prompted to enter your email address by the test.com wizard and your password will be emailed to you. Alternately you can contact the course sponsor.

Welcome!

Welcome to Test.com! We hope you enjoy using the world's leading web based testing software. Should you have any questions on the use of this application please notify your administrator or your test.com representative.

User Information

Name: Jane Smith
Email: mountaingirl203@gmail.com

Main Menu

Choose an action from the following menu:

[Click here to Take a Test](#) ← Click here to take a test.

[Restart and Continue an Unfinished Test or Other Content](#) ← Click here to continue taking a test you already started.

[Required Tests and Other Content](#)

[Display my user account information](#)

[Display my history including test results \(if available\)](#) ← Click here to look at the results of a prior test.

[Display my certificates \(if available\)](#)

[Display my access information and web links](#)

There are only three links on this page that may prove useful ignore the others:

1. [Click here to Take a Test](#)

Click on this link to begin taking a NEW test. Note: You may also use the "Take a Test" file tab at the top of the page.

2. [Restart and Continue an Unfinished Test or Other Content](#)

Click on this link to continue taking a test you have started but not finished. Remember that you must complete a test within ten days of starting.

3. [Display my history including test results \(if available\)](#)

Click on this link if you want to review the results of a previous test for study purposes.

Details on how to take a test:

Take a Test - Wilderness First Aid

Take a Test

You are taking the following test:

Name Wilderness First Aid
Description This test is required for WMTTC certification in Wilderness First Aid. Complete ALL DVD presentations and ALL case studies prior to taking the test for the first time. Questions are presented randomly. Partial credit is given for multiple answer questions and points are deducted for wrong answers.

Instructions

Circle corresponding letter next to all the correct answers directly on the test. There will be at least one correct answer for each question. All the answers are correct for some of the questions. Answer all the questions. IMPORTANT: The test.com site will time out after 20 minutes of inactivity. If you wish to look up answers to a specific question, go to the bottom of the page and submit your answers. Once you have submitted your answers, log-off and study; the system will remember where you last stopped. IF YOU DO NOT SUBMIT YOUR ANSWERS AND THEY MAY BE LOST. To continue with the test: log back into the test.com site, once logged-in you will be asked if you want to continue the test you already started and told to "Click here" to restart taking the test. Upon logging-in again you will be told you that you are in the middle of taking a test and asked if you want to continue. Choose this option and you should be able to continue with the test where you last stopped.

[Continue](#)

Read the directions on this page and click the **Continue** button when ready.

Answer all the test questions. Keep in mind that many questions have multiple answers. The scoring algorithm is complicated; it's weighted to give you more points for important answers and to subtract points for really BAD answers. BAD answers are ones that if make in real life may kill or permanently injure your patient.

There is a **Jump Back** button near the top of every page; use it to go back to your first unanswered question.

Completed - Take a Test - Wilderness First Aid**Completed - Take a Test**

You are finished taking the following test:

Name	Wilderness First Aid
Description	This test is required for WMTTC certification in Wilderness First Aid. Complete ALL DVD presentations and ALL case studies prior to taking the test for the first time. Questions are presented randomly. Partial credit is given for multiple answer questions and points are deducted for wrong answers.

Consider printing the results and explanations to focus your study.

Score	FAIL 130 points scored (or 66.7%) out of 195 maximum points (a score of 90.0% or greater is need to pass this test)
--------------	--

Once graded the test.com wizard will score your test and display the results for each question and the number of points you were awarded for the question. It may also give an explanation; note that not all questions include an explanation box. If an explanation is provided its intent is to guide your study not necessarily give you the correct answer.

- 2) **A female student who has been stung by a red ant on the top of her right foot initially complains of pain in her groin. She has no history of allergic reactions to red ants. Within a few minutes both her feet are flushed and hives are appearing on her stomach and flanks. A few minutes later she says her "lungs are closing in" and assumes a standing tripod position.**

Choose all that apply.

- A) She is experiencing a local allergic reaction.
- B) She is experiencing a toxic reaction.
- C) She is experiencing a systemic allergic reaction (anaphylaxis).
- D) You should give a .3 cc injection of epinephrine immediately.
- E) You should give an oral antihistamine and keep it current for 24-72 hours.
- F) You should use a Sawyer Extractor immediately to remove the ant venom.
- G) You should wait to see if she develops respiratory distress before administering epinephrine.
- H) You should begin a Level 1 evacuation and monitor her for a second phase reaction (rebound) and a return of her original S/Sx.
- I) You should begin a Level 3 evacuation and monitor her for a second phase reaction (rebound) and a return of her original S/Sx.
- J) She does not need an evacuation and may remain in the field.

Partial Credit: Your answers are partially correct. 4 out of 16 points.

This type of answer can be confusing. It means that some of your answers are correct... and others are incorrect. You gain points for correct answers and lose points for incorrect answers. It's your job to study the explanation and the topic (in this case: allergies) to get a higher score. There are 16 points possible in this question.

Explanation

Local allergic and toxic reactions from hymenoptera stings (wasps, bees, hornets, & fire ants) occur at the same time. While pain and a small welt indicate a local toxic reaction from wasps, bees, and hornets; fire ant venom moves up the lymphatic vessels causing a burning pain that quickly becomes focused at the associated lymph node. Her flushed feet (remember she was only stung on one foot) and hives indicate a systemic allergic reaction (rather than a local allergic reaction). When, a few minutes later, it becomes difficult for her to breathe, the systemic allergic reaction (anaphylaxis) is life-threatening.

When the ant venom binds with the abnormal antibodies on the surface of her circulating inflammatory cells the inflammatory cells release histamine into her blood. Epinephrine will reverse the S/Sx (the hives, flushed skin, and respiratory distress will disappear). If her S/Sx get worse after the 1st injection of epinephrine or do not disappear after 5 minutes, give her another .3 shot of epinephrine. Assuming the epinephrine works (it should) and all her S/Sx disappear she should be evacuated at Level 3 for physician follow-up and to get more epinephrine. As long the epinephrine reverses the S/Sx and she is breathing normally with no hives, a Level 1 evacuation is not necessary. You and her physician will also need to decide if further exposure to fire ant stings is likely and if it is safe for her to return to the field.

You need to score $\geq 90\%$ to "Pass" a test. Each test is designed to be a learning tool to prepare you for your practical session and real-life problems: very few students pass a test the first time. Don't be discouraged: take notes and use the explanations to focus your study. When ready, take the test again. You have five attempts to pass each test. Avoid taking back-to-back tests with little study time in between. While you might "Pass" the test, you probably won't learn very much. *If you fail a test five times you will NOT be permitted to attend the practical session and will NOT be receive a refund.*

Once you have successfully completed all the tests in a given course you will be emailed a certificate of completion. Please print the certificate and bring it to your practical session; you may need it to be admitted.

You can review the results of any previous test by logging back in and clicking on the [Display my history including test results \(if available\)](#) link. Your account in test.com will remain active for a year. If you have not used all your five tests, you can log in later and see how much you remember. This will help keep you current.

If you have problems please read the Glitches pdf file before contacting the WMTC office. Good luck. I hope you enjoy your course.

Sincerely,

Paul Nicolazzo

Director
